

AN OBSERVATION OF FAMILIAL OBLIGATIONS, FAMILIAL SUPPORT, AND STRESS LEVELS IN HISPANIC COLLEGE STUDENTS

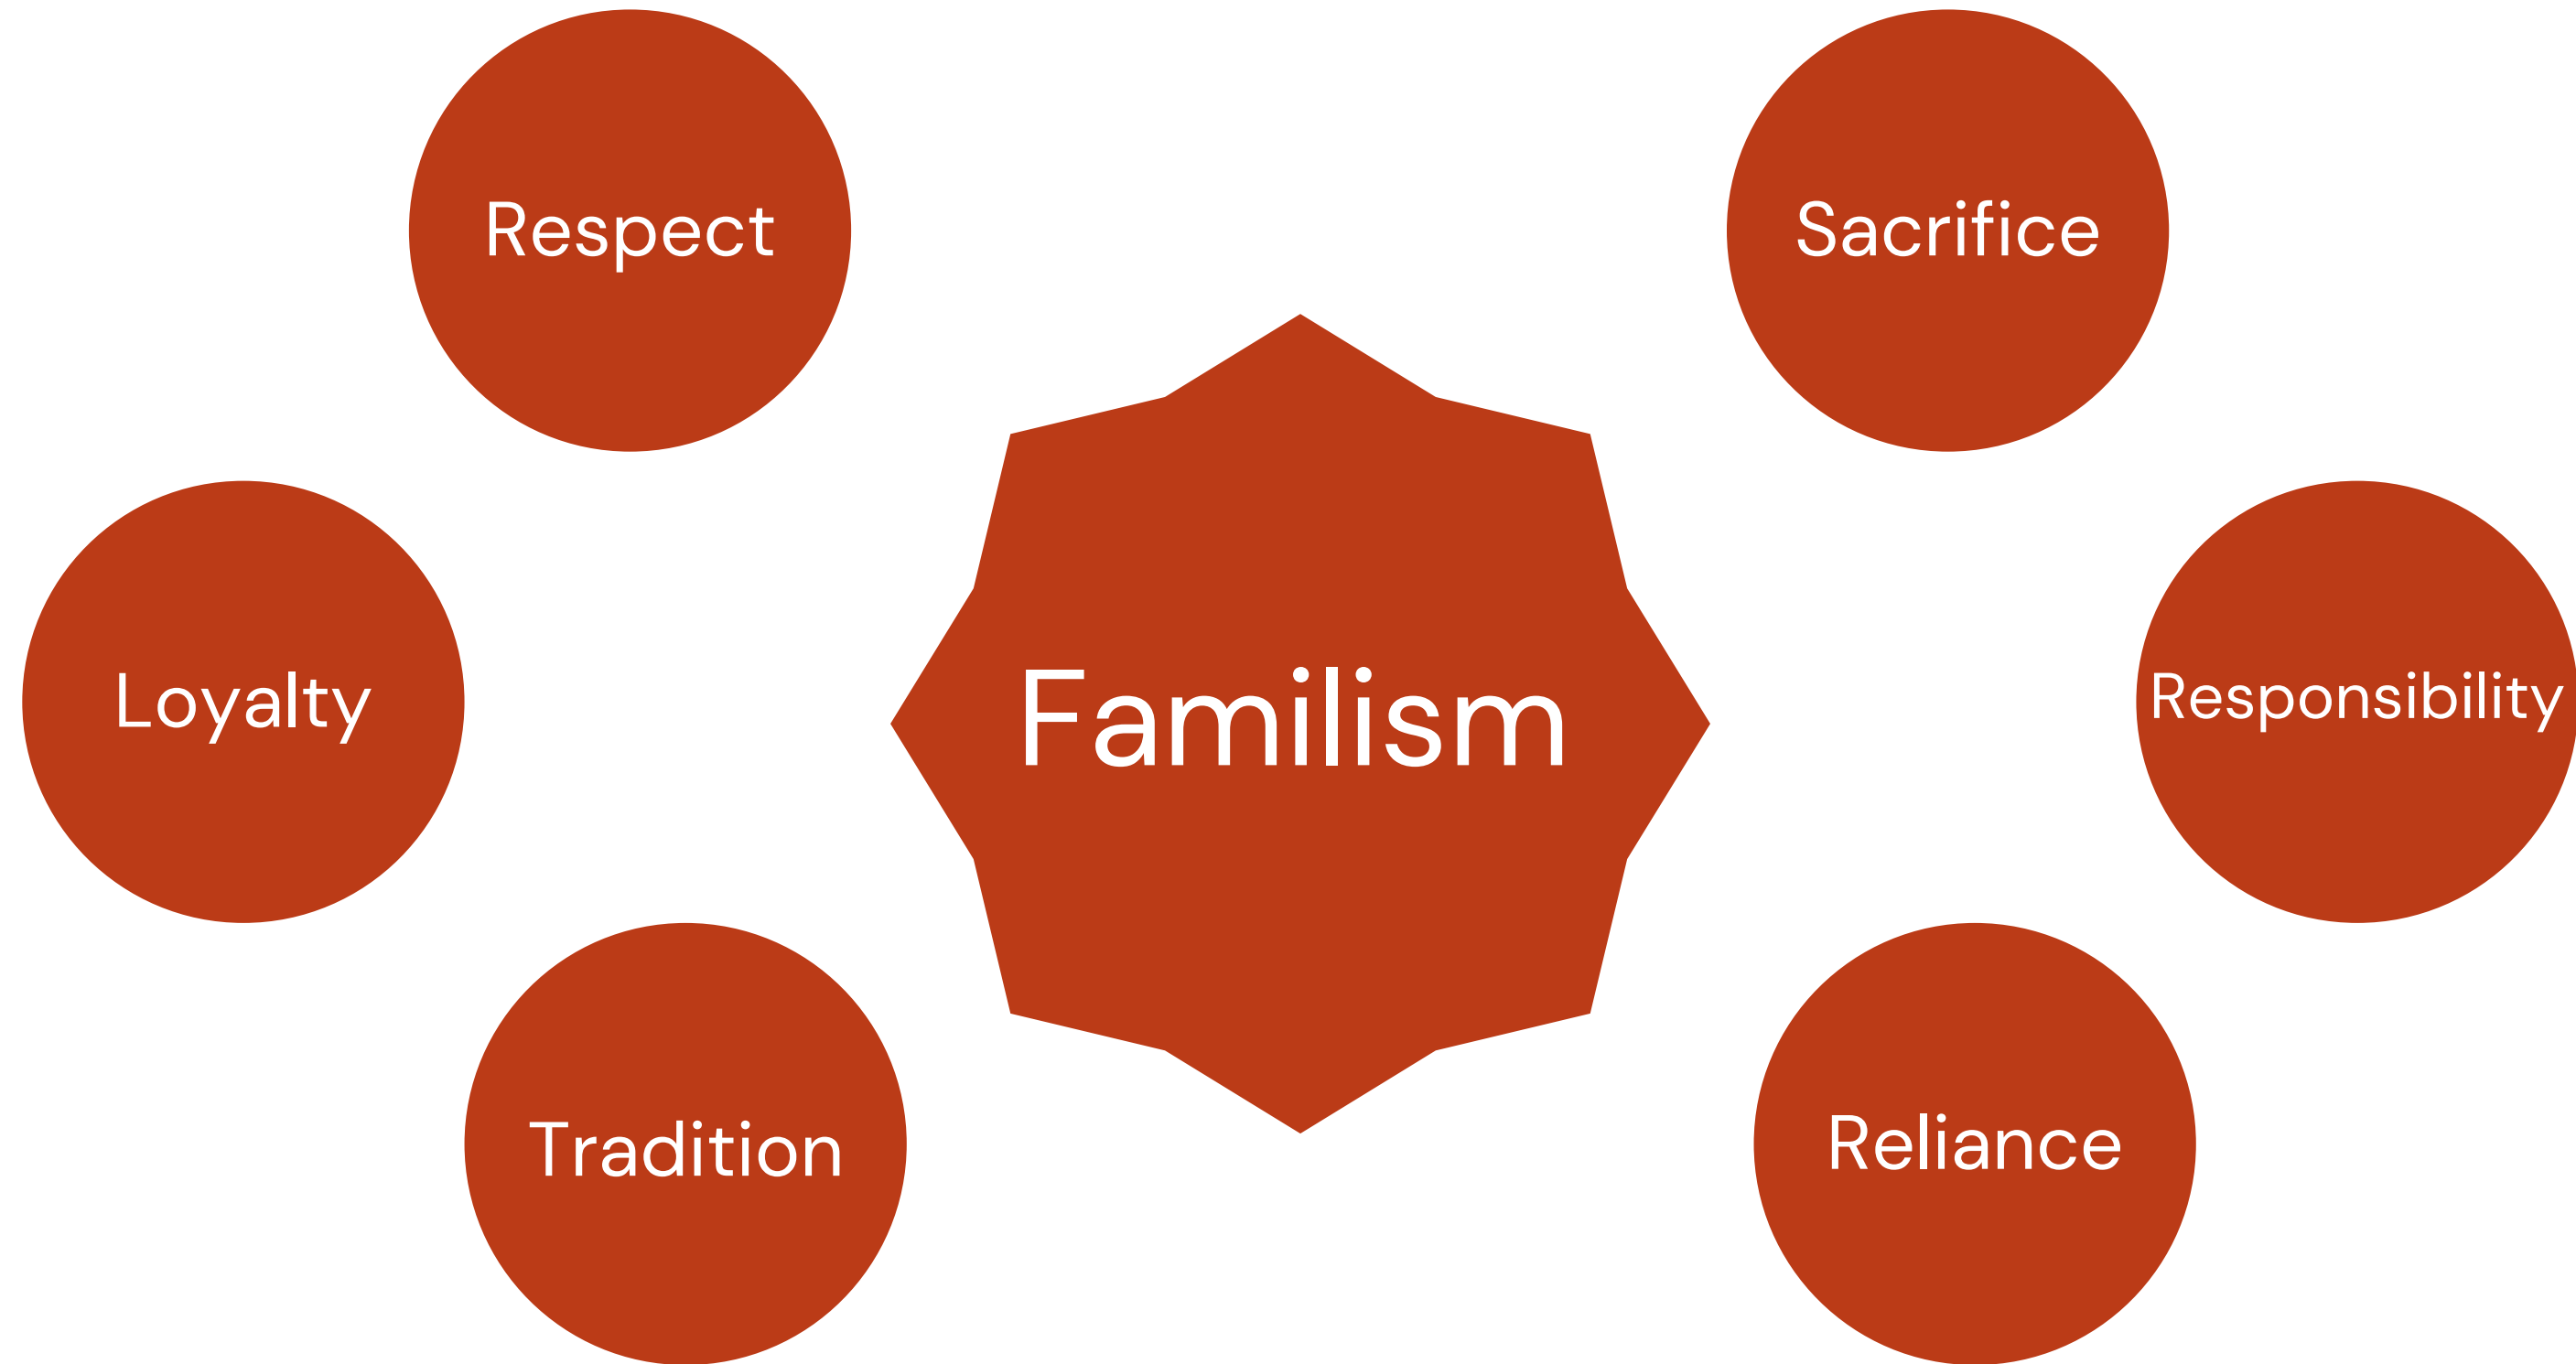

By: Kaycee Maldonado, Jordan Kenemore,
Sabrina Alaniz, & Grant Benham

RMPPA 2025 Conference

Q INTRODUCTION :

1

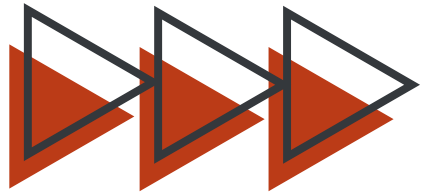

INTRODUCTION :

Familial Obligations

Balancing family expectations
with academic and personal
goals (Katiria & Cruess, 2014)

Familial Support

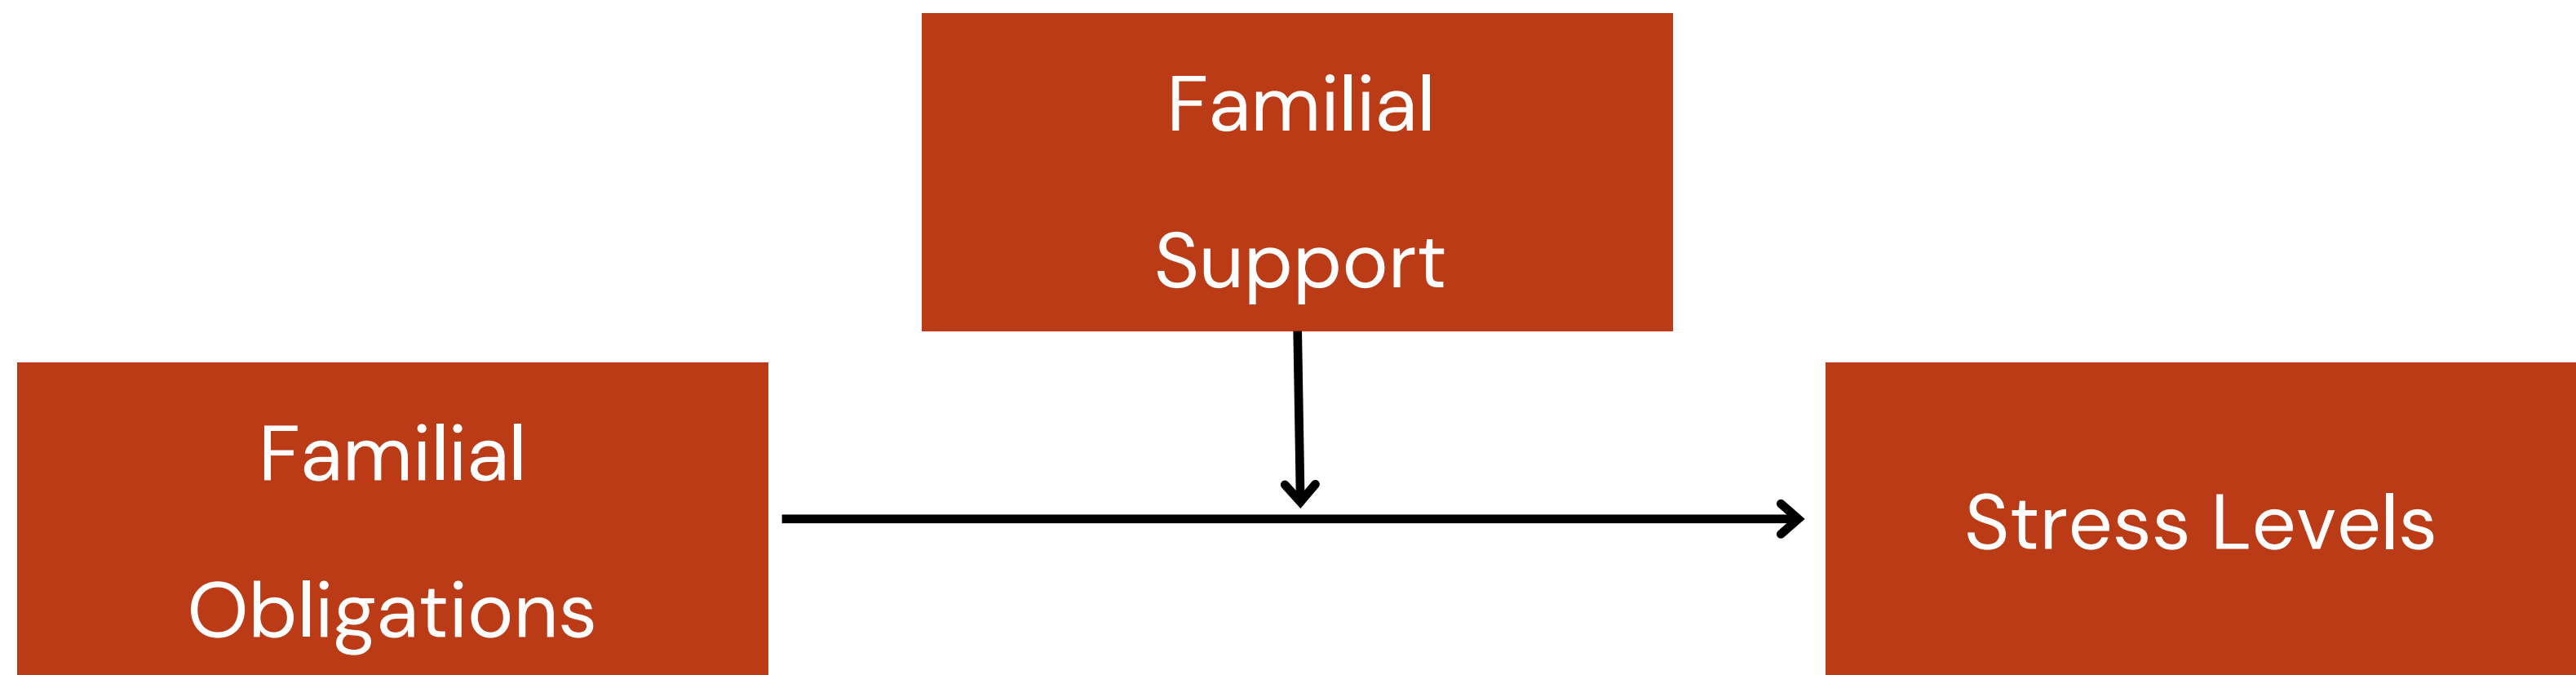

May reduce stress and reshape
perceptions of obligations
(Suwinyattichaiporn & Johnson,
2022)

PURPOSE/HYPOTHESES

3

Examine the relationship between familial obligations, familial support, and psychological stress in Hispanic college students.

METHODOLOGY

Participants

461 undergraduates

- 64.9% Female
- 94.4% Hispanic

Measures

- **Familism Scale** (Sabogal et al., 1987)
 - Subscales used:
 - Familial Obligations
 - Familial Support
- **Perceived Stress Scale** (Cohen & Williamson, 1988)

Results

5

Correlation Findings :

- Self-perceived stress negatively correlated with:
 - Overall Familism ($r = -.168, p < .001$)
 - Familial Obligations ($r = -.113, p = .008$)
 - Familial Support ($r = -.137, p = .002$)

Significance Key

$p < .001$

$p < .01$

$p < .05$

Correlation Table

	Age	Sex	Familism	Obligations	Support
Age					
Sex	-0.00				
Familism	-0.12	-0.18			
Obligations	-0.05	-0.06	0.83		
Support	-0.15	-0.09	0.73	0.53	
Stress	0.13	0.19	-0.17	-0.11	-0.14

N=461

Results

6

■ Sex Differences (t - test Results) :

- Females reported higher stress (M = 21.36, SD = 5.64) than males (M = 19.05, SD = 5.76)

	Age	Familism	Obligations	Support
Age				
Familism	-0.19			
Obligations	-0.11	0.83		
Support	-0.23	0.73	0.51	
Stress	0.13	-0.09	-0.03	-0.10

N= 296 (Females)

	Age	Familism	Obligations	Support
Age				
Familism	0.02			
Obligations	0.06	0.84		
Support	0.02	0.75	0.56	
Stress	0.14	-0.23	-0.23	-0.17

N= 165 (Males)

Results

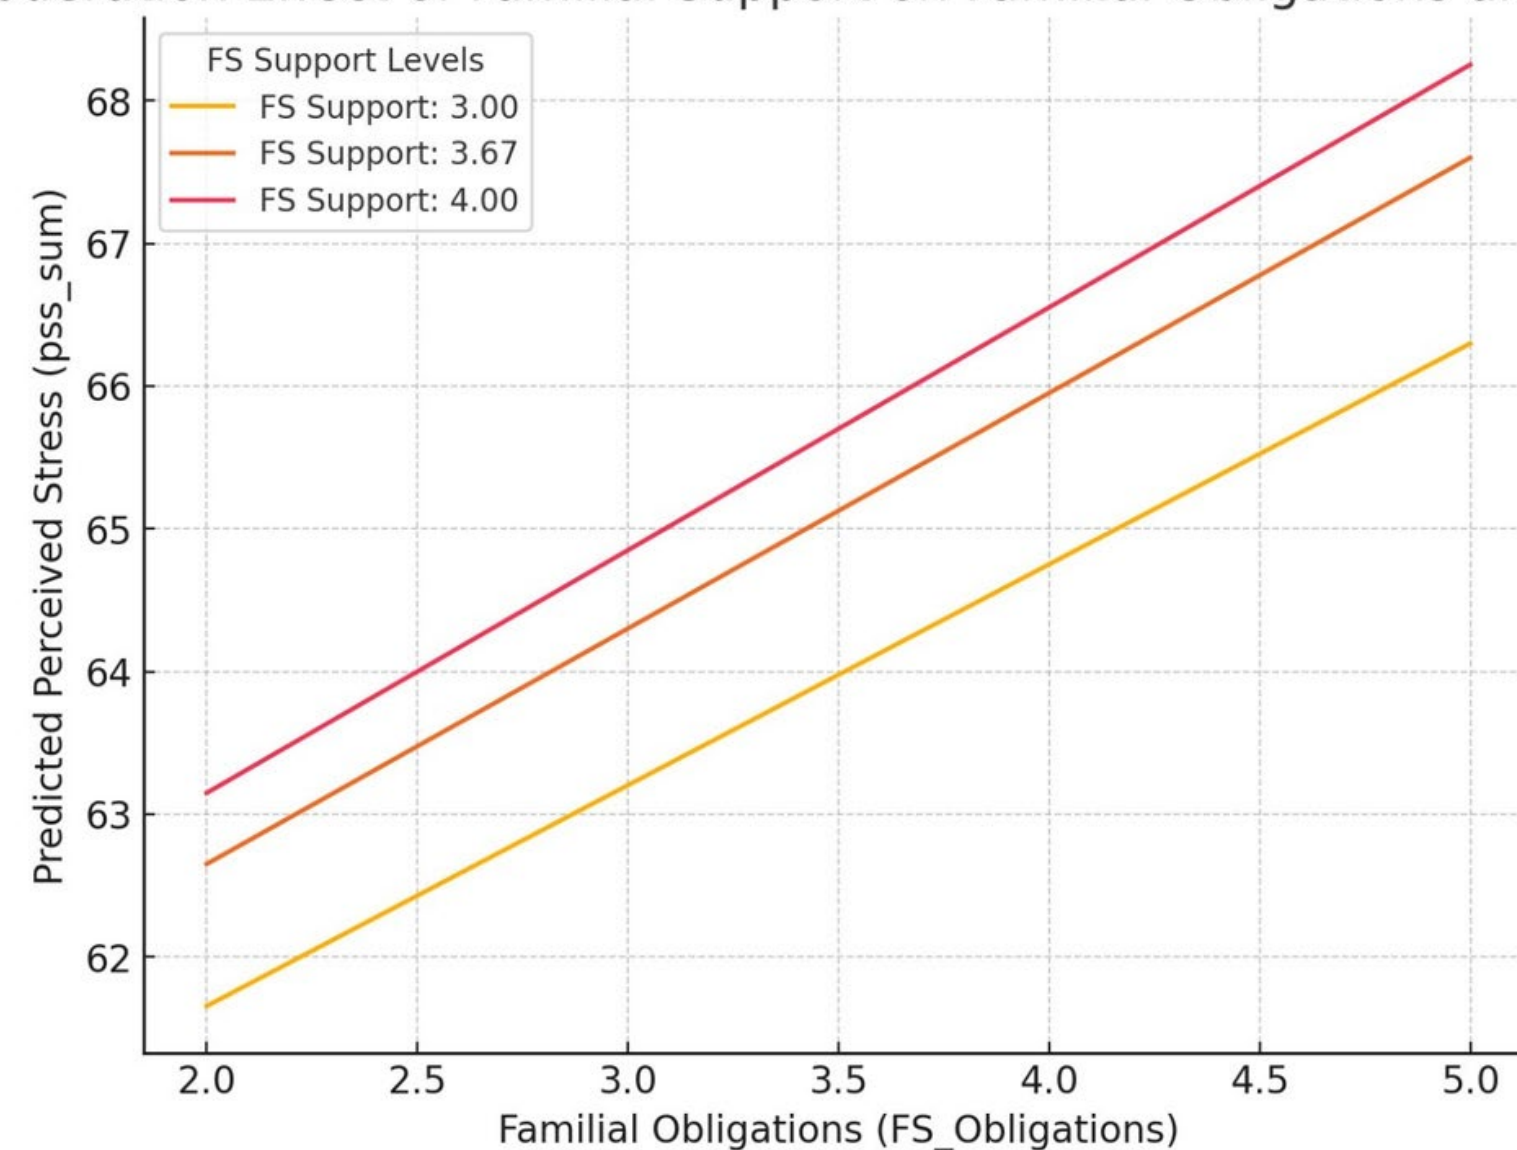

7

■ Moderation Analysis :

- No significant moderation by familial support
- Overall model explained only 7% of variance in stress
- Age & sex were significant predictors

Moderation Effect of Familial Support on Familial Obligations and Stress

Results

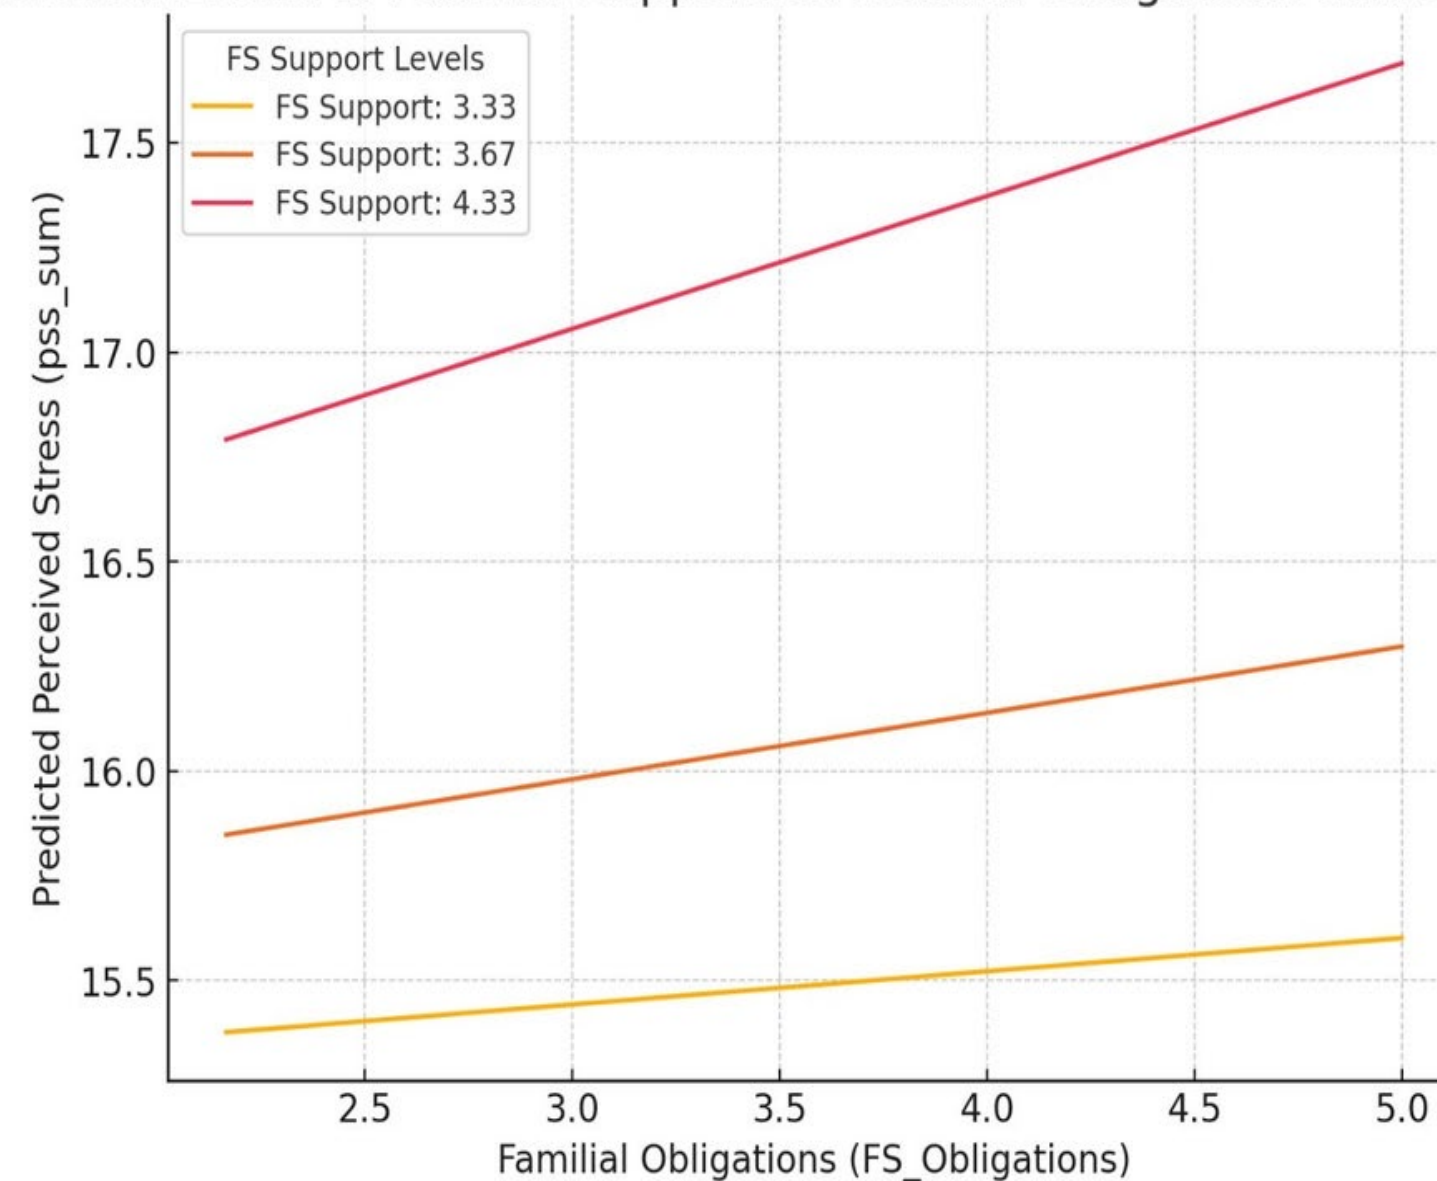

8

■ Separate Analyses by Sex:

- Males: Stress was negatively correlated with Familism, Obligations, and Support

Moderation Effect of Familial Support on Familial Obligations and Stress (Male)

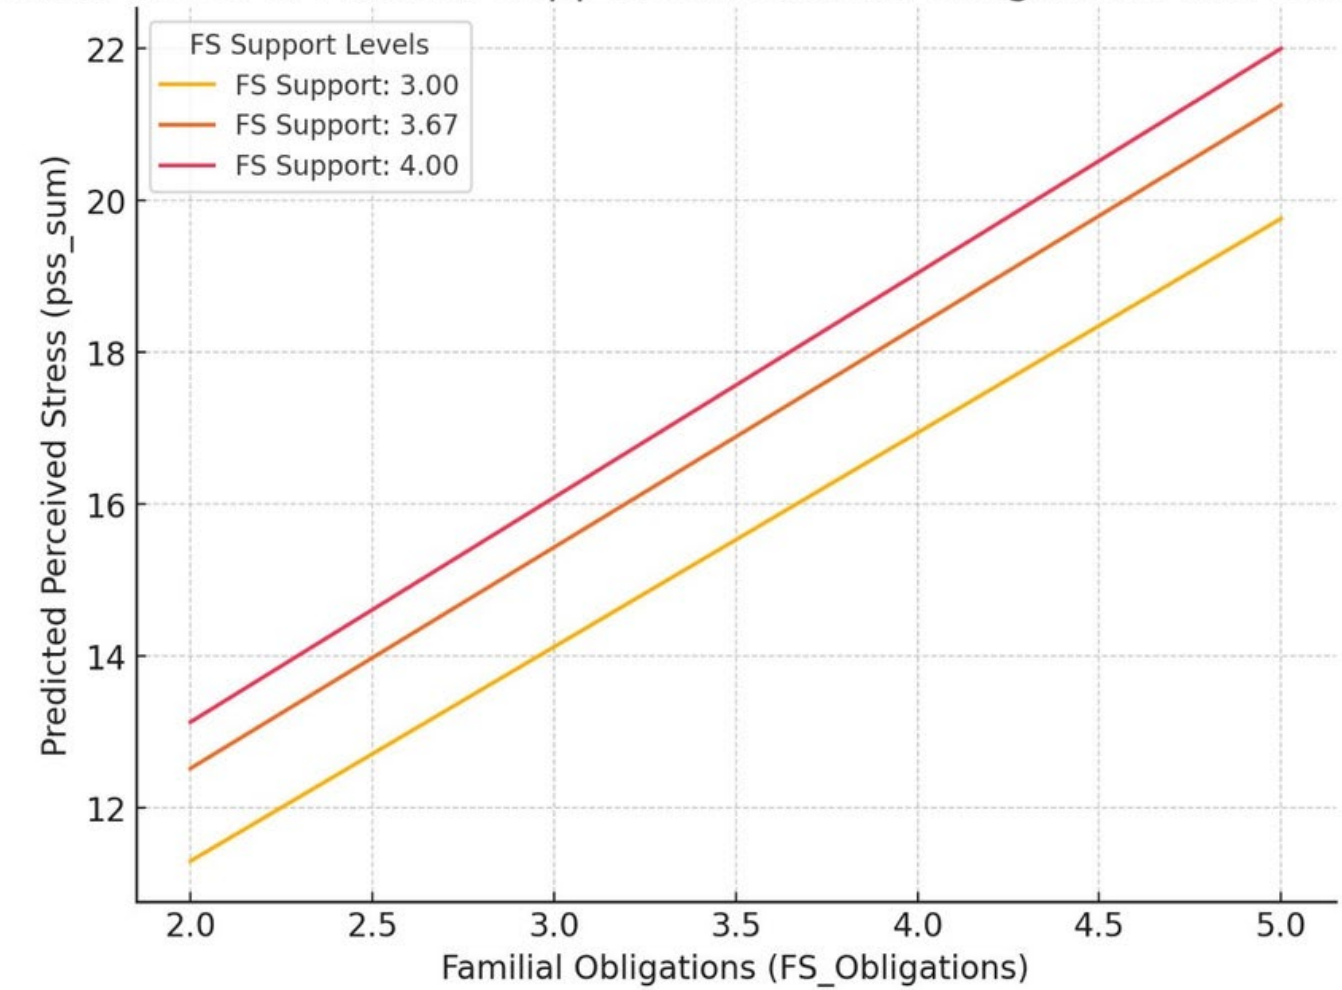

Separate Analyses by Sex:

- Females: Stress was only significantly correlated with Familial Support

Moderation Effect of Familial Support on Familial Obligations and Stress (Female)

Discussion

1

Higher familial obligations
correlated with lower stress.

2

No significant moderation by
familial support

DISCUSSION

Sex Differences

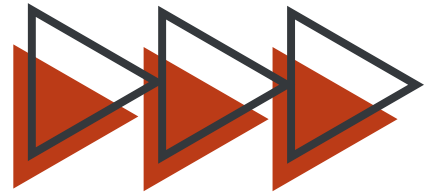

- **Males**: Familism plays a larger protective role
- **Females**: Support rather than obligations, is more relevant to stress levels

Cultural Context

- Inherently ingrained values
- Extended family = Main family
- 1st- Generation College Students

Discussion

Things to Consider

- SES
- Age
- Family Dynamics

Conceptual Considerations

- Potential overlap between Familial Obligations & Familial Support

THANK YOU!
